

Information Without Boundaries™
Track, Monitor, and Protect Your Assets - Anywhere.

Track, Monitor, and Protect Your Assets

AssetLink works with you to deploy the best global GPS tracking and remote monitoring solution for your business.

Our next generation satellite solutions are the lowest cost, most rugged, smallest and most versatile on the market.

Every asset matters. Whether your needs are local or global, AssetLink brings you the best solutions to increase your bottom line and reduce your operational risk.

AssetLink provides simple, affordable GPS tracking and remote monitoring worldwide for powered and unpowered critical assets.

We are your partners for the long-term. Our mission is to provide you with broader access to previously unavailable wireless solutions.

We will help you build intelligence into your asset base to inform critical decision-making, increase efficiency, and reduce risk. Learn about the most cost-effective, reliable, useful, longest battery life global asset tracking and industrial monitoring solutions.

Don't settle for monitoring just some of your assets, some of the time. GPS tracking and data telemetry with total global satellite coverage, anywhere, anytime. Call us today to learn more.

Information Without Boundaries™
Track, Monitor, and Protect Your Assets - Anywhere.

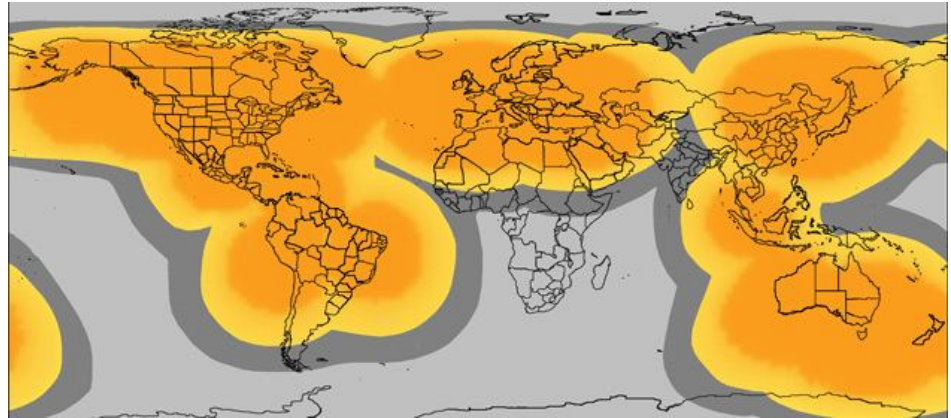

Network Operational Details

The AssetLink system uses the GPS network of satellites to obtain a precise location for your equipment. Any other data can be measured with sensors built into the field hardware.

A **second set of commercial satellites** then relays that information from **anywhere on the planet** to specially equipped satellite ground gateway facilities and to your desktop via secure internet link.

To make it possible to **track all your assets**, the next generation AssetLink hardware and service is as low-cost, low-power, small, and reliable as possible. Unlike other satellite systems, it takes the complexity out of the field hardware and puts it in the satellite system, the ground communications network, and the web-based software.

- 99% probability of successful transmission of a single message within 20 minutes
- 96-99% probability of successful transmission of a single message within 20 minutes
- <96% probability of successful transmission of a single message within 20 minutes
- No coverage

Estimated coverage. Actual coverage may vary and is based on network availability. Messages may be blocked by local obstructions, such as hills, heavy foliage, or buildings. Probability of successfully transmitting a single unique message as well as battery life estimates based on transmitting three identical copies of each message. In case the first message is not immediately received, two more copies are transmitted to assure overall reliability. Usage charges are for each unique message, not for each copy.

Developed for the US Military, AssetLink Global offers the next generation of GPS tracking and remote monitoring solutions so that you can track all your assets.

AssetLink Hardware on your Assets

Lowest Cost, Smallest, Most Rugged and Longest Lifetime Solution on the Market

GPS and Commercial Satellite Data Networks

AssetLink Web Software on your Desktop
